Warehouse Optimization RF

JDA® MMS® Support Services

Introducing StoreMobileRF for Tablets and Wireless Devices

Providing MMS users the tools they need to build loyalty and improve the Shopping experience in a Mobile environment

As technology strives to meet the demands of today's consumers, retailers search for affordable solutions that maximize their investment. However, implementing a mobile strategy is more than just a hardware or technology decision. It encompasses an entire strategy, that if done right, will change your entire store selling experience for both the customer and your staff. At RTC, we have designed a fully integrated Mobile solution that leverages your current JDA® MMS® investment, to help you stay ahead of your competitors while offering consumers a richer, more rewarding and more interactive shopping experience.

The first step in building a successful mobile strategy is to equip your staff with the right tools and solutions to be successful. That's why RTC created our StoreMobile[™] Suite of Applications. StoreMobile is one of the first truly mobile solutions designed for JDA MMS users. StoreMobile launches today's retailer onto the Mobile playing field by making traditional back office functions obsolete. Functions such as: inventory counts, receiving, transfers or item look ups can be done real-time, from anywhere in the store, from a simple RF gun or handheld device such as the Motorola ET1, or even popular Apple devices such as the iPAD, iPOD or iPhone.

StoreMobile maximizes staff efficiency and effectiveness providing a significant return on investment by keeping sales people on the sales floor and giving them the tools and information, they need, literally right in the palm of their hands. This powerful wireless solution allows MMS users to improve their operational work flow while viewing, collecting, and managing key information real-time to MMS. StoreMobile eliminates the need to be chained to the back office to do inventory and unnecessary paperwork. With its simple user friendly design and inputs, inventory management can be done accurately and efficiently, from anywhere in the

store, maximizing your productivity and customer services by keeping your staff visible to customers.

RTC has recently partner with Motorola Solutions to launch StoreMobile on the ET1 Enterprise Tablet. The ET1 is design for enterprise. It is retail hardened for use everyday in your warehouse or selling floor. It has all the features you need to connect with Shoppers like never before.

"I believe mobile technology will continue to gain traction in the store operation similar to how high speed networks replaced dial up modems", says Bruce Hicks RTC President and CEO. "Giving store personnel high speed wireless devices that can provide them "instant" access to inventory information across the entire chain and the internet. then act upon that information while servicing their customer, provides the store with an edge over their cyber store competitor. People like to interact with people; however, "showcasing" will only grow without providing the "tools" to compete on the store sales floor. StoreMobile RF on tablets such as the Motorola ET1 and a variety of Apple devices, such as the iPod Touch, iPad, and iPhone are game changers for the store."

Thoughts from the Boss!

The next "revolution" in the retail industry is pretty obvious at this point. If you have been under a rock for the past couple of years, I will state the obvious "MOBILITY". First high speed wireless networks, then smart phones, and now it is the culmination of all these technologies merging at the speed of light toward complete mobility in retail technology. It won't matter where the product comes from or how the customer receives it. The fact is, it can be purchased anywhere, anytime, and delivered wherever and whenever the customer wants it. How is this going to become the standard in retail? Simple: **The adoption of mobile technology, insures increased customer satisfaction and guarantees ROI for the retailer.**

Now for the bad news for many retailers. Although JDA MMS is still an industry leader in ERP solutions in large chain retail, to date this legacy application lacks a definitive mobile strategy capable of taking its customers into the world of retail mobility. At RTC, we are committed to assisting retailers in winning the mobile revolution, without requiring a systems revolution. Our long term business plan has been to take the lead in designing and implementing bridges between today's world and the retail world of tomorrow. Through our MMS Xtend suite of applications we are taking the "bull by the horns" on behalf of all JDA MMS customers. Our StoreMobileRF and Warehouse Optimization RF solutions are leading the way by offering retailers innovative tools to increase staff productivity and enhance customer service. Our StoreMS Dashboard delivers the functionality retailers need to stay ahead of problems and take preventative steps when needed.

Believe me, this is just the beginning. We continue to deliver the MMS enhancements, consulting services and retail POS solutions that retailers need. Our next generation StoreMS POS solution will soon be released and with the announcement of Verifone's new Verishield Protect, boasting end to end encryption and running on the Apple iPod Touch and iPad, you can be assured PCI "Best Practices" is on our minds. We are confident this approach will take the mobile POS application completely out of scope for PCI.

If you are not sure how your company is going to evolve and compete in this "revolution", I suggest you call us and arrange a consultation with DeVan McArthur, our EVP Consulting. I have always prided myself on having extreme industry "Vision" and I must say that when I hired DeVan McArthur as my partner back in 1990, I hired a "Visionary" that thinks so far ahead of everyone else that we call him Mr. Utopia!!

RTC's New Warehouse Optimization RF Suite Helps Peavey Mart Significantly increase Productivity

In 2010, Peavey Mart selected RTC to implement their advanced radio frequency capabilities in JDA® MMS®. Peavey Mart, a Canadian hardware retailer with 29 stores across Western Canada, decided to increase their warehouse productivity and efficiencies, and they looked to RTC's Warehouse Optimization RF, to provide a solution. Peavey was experiencing many of the same challenges most growing retailers face as business grows and their inventories expand. Inefficiencies in their warehouse systems were identified and RTC partnered with Peavey executives like Carolin Miller, Manager Information Services, to identify solutions and ultimately increase overall productivity.

"We have seen a dramatic increase in our overall productivity as a result of our Warehouse Optimization implementation", says Carolin Miller. "Our PO receiving processes have increased 25%. However, the most significant increase is in our picking accuracy. We have seen a 90% accuracy increase at the quantity level and a 48% increase at the SKU level. These numbers are directly related to the increased accuracy and accountability that RTC's Warehouse Optimization application delivers."

"When we set out to develop the Warehouse Optimization

RF application suite, we wanted to ensure that the functions we provide would allow businesses to streamline internal business processes while increasing accuracy, says Fabian Rosario, RTC VP Special Retail Systems Projects. "We also placed significant emphasis on usability--making sure the end product contains screens that are intuitive and effectively utilize functionality from the underlying MMS distribution center application. The results we have seen indicate that we indeed achieved those goals and I am thrilled at how well it has helped Peavey's operation."

Warehouse Optimization RF is part of our MMSxTend suite of applications which are perfectly integrated with JDA MMS and designed to offer a cost effective value add solution for retailers looking for an extensive set of features and capabilities, at a Great price.

Optimization Areas Include:

- Physical Inventory
- Purchase Order Receiving
- Putaways
- Letdowns
- Manual Moves
- Picking
- Shipping
 - Inquiries and Reports

JDA MMS JDA Retail IDEAS StoreMS Dashboard StoreMS Gift Card Great Plains Financials

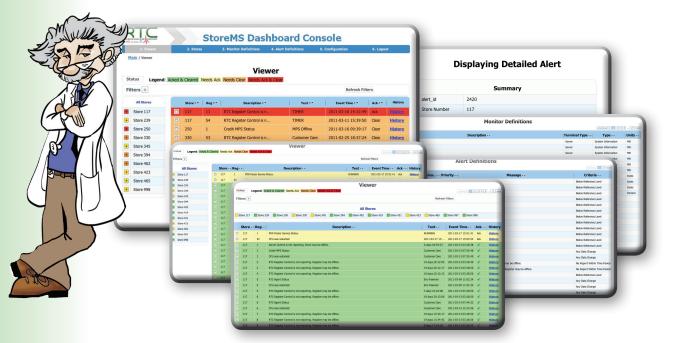

Eliminate Headaches with Your POS system, before they begin StoreMS Dashboard makes it easy to keep tabs on your POS

StoreMS Dashboard continues to revolutionize and improve retailers' productivity and efficiencies. In 2009 RTC launched StoreMS Dashboard, a unique Help Desk system and network module that enables the monitoring of a retailers chain-wide store systems network from a single location. StoreMS Dashboard is designed to enable preventative maintenance before issues become problems for the retail stores and increases the integrity and accuracy of POS data.

"With the pressure constantly on the rise to reduce operating costs throughout the retail corporate infrastructure, it is commonplace for the retailer to lean on technology to find another way to reduce its operating costs", says Duane McGlamery, RTC VP of Store Systems. "StoreMS Dashboard is the first of its kind to tackle the cost of the "Store Help Desk" operation while significantly increasing its service levels. The "Dashboard" is designed to actively monitor literally hundreds of "metrics" within the store system including hardware, firmware, software, network, data, and connectivity to critical third party services such as credit, loyalty and aift card providers. The beauty in this tool is in its approach. The Dashboard is not passively reporting a problem; rather, it is emailing and calling appropriate resources upon discovery on an issue and it will not rest until the problem is rectified. It is the ultimate "watchdog" for store operations!!"

StoreMS Dashboard monitors over 300 processes ranging from hardware, software, device drivers, credit status, security, inbound and outbound data just to name a few. StoreMS Dashboard allows you to instantly pinpoint system problems anywhere within the enterprise from a single remote location. When issues arise, StoreMS Dashboard will alert key personal via email, SMS or both so the problems can be handled and fixed. In most cases, the issues can be handled and solved before store personnel even know there was a problem. StoreMS Dashboard significantly reduces labor cost and travel expenses. Ever had problems where price changes did not get down to the store's POS and the customer had to tell store personnel their advertised prices were wrong? StoreMS Dashboard monitors the pricing events going down to your stores. If the pricing event did not get to the store and process, StoreMS Dashboard will alert key personnel before the store opens so the issue is corrected before the store even opens for business!

Contact RTC today for a full demonstration of this revolutionary new product, StoreMS Dashboard.

New Hires

RTC welcomes Kevin Marron as our latest addition to the RTC team as Manager of "Cloud 9" Services!! Kevin brings over 20 years experience working for Drug Fair Group and in 2004 earned Director of Management Information Systems. Kevin was part of the JDA MMS Implementation Team for Drug Fair and spent the majority of his career programming and managing within that environment. This vast wealth of experience, both working directly for a large chain retailer and extensive experience within JDA MMS makes Kevin the perfect hire for managing RTC's retail operations outsource data center. RTC's customer service levels just went from top of the charts to Cloud 9!!

RTC Offers 24/7 MMS Support Services at an Outstanding Value

MMS Users, if an upgrade path is not for you, consider Support Services from RTC and stay on your current version of JDA Software, with the support, attention and responsiveness you need, but at half the cost.

Are you currently running a version of JDA® MMS® released 9 years ago or older, and are unwilling or unable to upgrade at this time? You may neither have the budget nor manpower to take on an upgrade at this time. Furthermore, you may have a significant investment in MMS internal development and enhancements in your current version, which may be financially unfeasible to incorporate in an upgrade.

If you are in this difficult position, RTC has a solution that can keep you on your current version of MMS while cutting your support costs in half. RTC's Support Services offers 24/7 JDA MMS support for your current version of MMS at a cost that is 50% less than JDA. Best of all, RTC's Support program provides all the same 24/7 service and support you need but with dedicated attention to detail you want.

RTC currently supports several clients in our Orlando data center. Contact RTC today to learn more about how our Support Services can make an immediate impact on your business. Our knowledgeable support staff has over 22 years' experience managing MMS environments for retailers and we pride ourselves on our responsiveness and attention to detail.

RTC's clients leverage our vast retail and IT skills to ensure smooth managed operations and programming services at a very affordable rate. RTC will ensure that your solutions run smoothly and are always available for your users.

RTC looks forward to supporting you, on your current version of MMS, as long as you wish to continue on that version. We value your MMS business and have invested heavily in the development of MMS through enhancements and bolt-on modules that allow retailers like you to fully maximize their JDA MMS investment. I hope you will see how this program helps to provide you a practical alternative to upgrading or ending MMS maintenance altogether.

To learn more, please call Lee Williams @ 1-800-993-3944, to discuss the details and receive a no obligation quote based on your current JDA maintenance budget.

Contact RTC today to learn more about all of our MMSxTend solutions 800-993-3944 or www.RTC-Group.com
