

## Dashboard Management Module

RTC's Dashboard Management Module (DMM) helps improve the performance and management of JDA's MMS<sup>®</sup> software by monitoring critical systems and business indicators. DMM provides a set of visual gauges to spark management's attention to potential problem areas and serves as an alternative to MMS's alert capabilities that utilize advanced logging. DMM also provides a series of business gauges that can highlight areas where action may be required to optimize business results. The module is part of RTC's MMSxTend Application Suite and is extremely easy to configure and use. DMM allows authorized users the ability to drill into MMS on a daily basis, see details and address any problems from the indicator gauge. There is no need for staff to produce query reports to identify breakdowns. DMM provides a quick view and highlights the indicators that fall outside of the customer-defined parameters. Indicators are presented in Green when acceptable. Yellow if within a defined cautionary range, and Red within high alert range.

### System Features:

- JDA Data Synchronization.
- Unprocessed DSDs.
- Unprocessed Store Use Batches.
- PO Receivers in Dock Check-in Status. for more than X days.
- Bulk PO Status Code Monitor.
